

Romane Canal 12

With the warm natural Terracotta colour, the Romane Canal 12 offers all the qualities of Romane Canal TBF, such as remarkable aesthetics, robustness and easy installation. The tile has a large and powerful curve pronounced by a very short visible gauge.

Its format, strength and great value make it one of today's most successful Terracotta tile in the world.

Robustness, And Exclusive Design

Aesthetically, the double cornet of Romane Canal has a remarkable appeal, as it creates sunlight and shadow-effects which can be compared to those of short barrel tiles. It also provides an outstanding "light weight / high resistance" ratio, especially for such a strongly-curved format [Romane-style].

Proven Quality

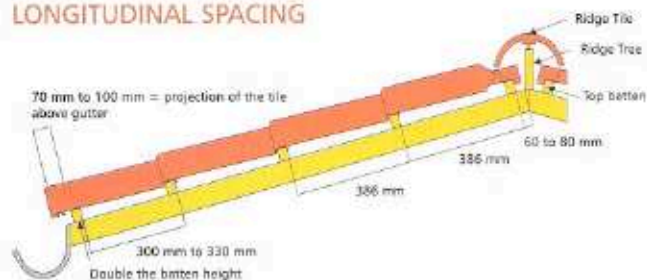

This Southern format tile is the result of a perfect earthy/process combination, thanks to dedicated production lines. Always regular and easy to fix, the Romane Canal is appreciated both for its high quality standard and for its durability
